FARIS MAULANA

Manager, AI Engineering | LLM Systems & Multi-Agent Architecture | Data & AI Platform Lead

Bogor/Jakarta, Indonesia | maulanafaris016@gmail.com | +62-812-8404-9172 linkedin.com/in/faris-maulana-0035b914a | github.com/Faris-Maulana | faris-portfolio-red.vercel.app

SUMMARY

AI Engineering Manager with 5+ years of progressive experience spanning LLM systems, multi-agent orchestration, data engineering, and enterprise business intelligence. Currently building the AI Engineering function from zero at a national 25,000+ km DWDM fiber backbone operator - owning the data platform, on-premise LLM serving, and agent layer end to end. Track record shipping production AI and analytics across telco, maritime, healthcare-adjacent research, and enterprise LLM consulting. Comfortable operating at both the architecture level (medallion DWH, LangGraph multi-agent Text2SQL, RAG evaluation) and the delivery level (dashboards, ETL, stakeholder-facing reporting). Active smart contract security researcher (Sherlock, Code4rena, Immunefi).

PROFESSIONAL EXPERIENCE

Manager, AI Engineering, PT Trans Indonesia Superkoridor (TIS) (May 2026 - Present)

Jakarta, Indonesia | Founding AI Engineering hire at a neutral 25,000+ km DWDM fiber backbone operator

- Building the AI Engineering function, data platform, and agent layer from zero - covering hiring, architecture, and delivery.
- Designed a full medallion-architecture data platform (Bronze/Silver/Gold) using ClickHouse (OLAP), PostgreSQL (metadata/serving), dbt-core (transformations), Airflow + Airbyte (orchestration/ingestion), and OpenMetadata (cataloging) to provide reliable, governed SQL data for AI consumption.
- Architecting a LangGraph-based multi-agent Text2SQL system over fiber-network operational data (NMS uptime, NOC logs, customer/billing), separating schema discovery, question planning, SQL generation, validation, execution, and answer synthesis.
- Led infrastructure discovery and ETL/CDC migration paths across MySQL/MariaDB/Ubuntu systems with undocumented schemas, and legacy NMS sources (Zabbix/PRTG/SolarWinds), to automate data ingestion for AI models.
- Evaluating on-premise LLM serving (vLLM, SGLang) across Apple Silicon and Ubuntu production servers; all design decisions enforce PP 71/2019 data-sovereignty - fully on-prem, air-gapped, no third-party cloud.
- Presenting architecture and platform progress directly to founder/owner and IT leadership stakeholders.

Master Consultant, AI Engineer, iMerit Technology (Dec 2025 - Present)

United States (Remote)

- Lead end-to-end LLM engagements for enterprise clients - problem definition, dataset strategy, evaluation, fine-tuning, and production deployment aligned with client SLAs and business goals.
- Design task-specific fine-tuning pipelines using domain-labeled data, RLHF, and red-teaming workflows to improve model accuracy, safety, and on-task behavior for high-risk use cases.
- Partner with data-annotation and domain-expert teams to define labeling guidelines, QA processes, and edge-case strategies, raising training-data quality and reducing hallucination rates.
- Evaluate LLM performance with quantitative and qualitative metrics (A/B testing, failure-mode diagnosis) and iterate on prompts, data curation, and model configuration.
- Advise clients on RAG patterns, vector database selection, guardrail design, and AI governance - supporting the move from PoC to compliant production deployments.

Data Analyst (AI/BI), PT Berlian Laju Tanker Tbk (Dec 2024 - May 2026)

Jakarta, Indonesia | Fleet of 15+ tankers and gas carriers

- Built and maintained 20+ interactive Power BI dashboards across Technical, Safety, Operations, Commercial, Accounting, Finance, and subsidiary (Dewi Sri Maritime, BDN) departments, giving managers daily visibility on incidents, off-hire, bunker usage, and OPEX vs. budget per vessel.
- Engineered SQL/Oracle queries on the Danaos ERP suite (incl. Planned Maintenance System), B-Path, and B-One systems to consolidate technical, crewing, and financial data into a single reporting layer - reducing manual report preparation by ~50%.
- Configured and continuously maintained the Danaos Planned Maintenance System (PMS) so job lists, running hours, and survey dates stayed current, improving maintenance planning accuracy and reducing overdue jobs and class findings.
- Designed and deployed a crew Personal/Performance Assessment (PA) web application (React + Node.js + MySQL) with RBAC across appraisees, supervisors, reviewers, and decision-makers, and a parallel state-machine workflow to remove sequential-approval bottlenecks; verified with Playwright E2E tests.

- Directed annual technical budgeting for 11 tankers/gas carriers - spare parts, stores, and LSA vs. approved budgets - and prepared audit-ready datasets and reconciliations for internal/external audits.
- Automated forecasting models with advanced Excel (Power Query, VBA) layered with basic ML models to improve data accuracy and shorten analysis cycles.

Lead Data Scientist, Toyota Research Institute (Mar 2024 - Nov 2024)
Jakarta Metropolitan Area (Hybrid)

- Applied ML algorithms (regression, decision trees, clustering) using Python and PyTorch to healthcare and automotive research problems, under HIPAA-equivalent compliance frameworks.
- Translated high-dimensional research findings into actionable stakeholder recommendations; collaborated cross-functionally to align data science work with business goals.

Data Scientist, Telkom Indonesia (Feb 2023 - Nov 2024)
Jakarta, Indonesia (On-site)

- Defined and executed the AI product roadmap for Indonesia's leading telecommunications operator, aligned with Telkom Strategic Insights initiatives.
- Built end-to-end data science projects across NLP (text and speech) and computer vision, delivered via REST APIs into production workflows.
- Managed stakeholder relationships across business units; developed business cases and value propositions for new and existing AI initiatives.

ADDITIONAL EXPERIENCE

- Sales & E-Commerce Analyst - torch.id, Depok (Oct 2023 - Feb 2024): Power BI dashboards for sales/executive visibility; ERP-based dropship and supply-chain operations; competitive analysis and revenue forecasting.
- Data Scientist Intern - PT Rajawali Nusantara Indonesia (Persero), Jakarta (Oct 2022 - Mar 2023): built an admin panel and internal tooling with Next.js/React/TypeScript.
- Content Developer Intern - PACMANN, Remote (Nov 2022 - Apr 2023): authored ML/statistics/mathematics course content, exercises, and assessments.
- Data Analyst Intern (Generasi Gigih 2.0) - Yayasan Anak Bangsa Bisa, Jakarta (Feb - Aug 2022): analyzed educational data to improve learning quality across West Java province.
- AI for Startup Intern - Orbit Future Academy, Jakarta (Aug 2021 - Feb 2022): built "Digital School," a face-recognition attendance, uniform-detection, and mood-analysis system.
- Computer Lab Assistant - Universitas Pancasila: Algorithms & Data Structures (2022); Programming Algorithms (2021).

SELECTED PROJECTS

Text2SQL Multi-Agent Platform - PT Trans Indonesia Superkoridor (2026, ongoing)

- End-to-end on-premise AI platform: ClickHouse + PostgreSQL medallion DWH, dbt-core, Airflow, Airbyte, OpenMetadata, LangGraph multi-agent Text2SQL, vLLM/SGLang inference.

Antigravity - RAG Evaluation System (2025)

- Production-quality RAG pipeline (LangChain + ChromaDB + sentence-transformers bi-encoder + cross-encoder reranker + Groq inference) with a custom RAGAS-replacement evaluator for faithfulness, relevance, and retrieval diversity - no ground-truth API calls required.

NOC Monitoring AI Agent - Telco Infrastructure (2026)

- Proof-of-concept network monitoring agent (FastAPI + LangChain + ClickHouse + Fonnte/WhatsApp) for real-time NOC alerting and natural-language incident queries.

Maritime Performance Appraisal Application - PT Berlian Laju Tanker

- RBAC-driven, parallel state-machine appraisal workflow (React + Node.js) replacing a fragmented sequential process; weighted scoring, audit logs, Playwright E2E coverage.

Smart Contract Security Research - Web3 Bug Bounty (2024 - present)

- Active auditor on Sherlock, Code4rena, and Immunefi - discovering reentrancy, access-control, and arithmetic-overflow vulnerabilities in Solidity smart contracts; structured exploit write-ups.

TECHNICAL SKILLS

AI / LLM: LangChain, LangGraph, RAG pipelines, RLHF, fine-tuning, prompt engineering, vLLM, SGLang, Hermes Agent, Groq, Claude/GPT/Mistral/Llama APIs, guardrail design, red-teaming, AI governance

ML / Data Science: PyTorch, TensorFlow, scikit-learn, XGBoost, CatBoost, HuggingFace Transformers, sentence-transformers, cross-encoder rerankers, NLP, Computer Vision, statistical modeling & forecasting

Data Engineering: ClickHouse, PostgreSQL, MySQL, Oracle SQL, dbt-core, Airflow, Airbyte, OpenMetadata, pgvector, ChromaDB, Medallion architecture, ETL/CDC pipeline design

BI & Analytics: Power BI (advanced), Power Query, VBA, Tableau, Google Data Studio, KPI/dashboard design, financial & compliance reporting

Programming: Python (advanced), SQL (advanced), JavaScript/TypeScript, Node.js, React/Next.js, FastAPI, Docker, Git, Linux/Ubuntu

Enterprise / Maritime Systems: Danaos ERP (incl. PMS), Oracle ERP, B-Path, B-One, RBAC design, audit logging

Security Research: Solidity smart contract auditing - Sherlock, Code4rena, Immunefi; reentrancy, access control, oracle manipulation, invariant testing

EDUCATION

S.T. (Sarjana Teknik) in Informatics Engineering - Universitas Pancasila, Jakarta
Graduated February 2024 (yudisium) | GPA 3.78/4.00

- Coursework: Machine Learning, Data Science, Database Systems, Software Engineering, Algorithms & Data Structures
- SMAN 5 Bogor (Natural Sciences track): National Science Olympiad (OSN Physics) - 5th Place, 2018; PSN Mathematics - Finalist, IPB 2016

CERTIFICATIONS

- Master Consultant / AI Engineer - iMerit Technology (2025 - present)
- BNSP Certificate of Competence: Lead Programmer - LSP Universitas Pancasila (issued Nov 2022; 3-year validity)
- AI Strategy & Implementation - Telkom Indonesia Advanced Program (2023 - 2024)
- Type A AI Data Contributor, Empirical LLM Evaluation - T-bench / Terminal-Bench (2025)
- Claude Code in Action - Anthropic (Mar 2026)

LANGUAGES

- Indonesian - Native
- English - Professional working proficiency (technical & business communication)
